

# Output

Mr. Poole  
Python

# How have we done output in Java and C++?

## Java

```
System.out.println("Hello World");
```

## C++

```
cout << "Hello World" << endl;
```

# Output in Python

```
print("Hello World")
```

Pretty simple :)

**BUT NOTICE**

**No semicolon necessary.**

## Output in Python

```
print("Hello " + "World")
```

We can also use the concatenate function.

Similar to Java

# Lab: Output

1. Write the Happy Birthday song to your favorite person!
2. Output should look like the below:
  - a. Happy Birthday to you!
  - b. Happy Birthday to you!
  - c. Happy Birthday, dear \_\_\_\_\_!
  - d. Happy Birthday to you!
